-i- FUNCTION: Acts as an endocytic receptor to direct captured antigens from the extracellular space to a specialized antigen-processing compartment (By similarity). Causes reduced proliferation of E lymphocytes.

-i- SUBCEELULAR LOCATION: Type I membrane protein (By similarity).

-i- TISSUE SPECIFICITY: Expressed in spleen, thymus, colon and

specifically to DNA containing mismatched nucleotides thus providing a target for the excision repair processes characteristic of postreplication mismatch repair (By similarity).
-!- SUBUNIT: Heterodimer of MSH2 and MSH6 (GTBP) (By similarity).
-!--SIMILARITY: Belongs to the DNA mismatch repair mutS family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRAIN=972;

"Identification of open reading frames in Schizosaccharomyces pombe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA Res. 4:363-369(1997).
-!- FUNCTION: HIGH-AFFINITY GLUCOSE TRANSPORTER.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the sugar transporter family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Glycoprotein,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isold=077086-2; Sequence=VSP_001823;
-!-TISSUE SPECIFICITY: Ubiquitous.
-!- DEVELOPMENTAL STAGE: Throughout development.
-!- SIMILARITY: Contains 1 N-terminal Ras-GEF domain.
-!- SIMILARITY: Contains 1 N-terminal Ras-GEF domain.
-!- GAUTION: Ref.1 Sequence differs from that shown due to a frameshift in position 39.
-!- CAUTION: Ref.4 Sequence differs from that shown due to a frameshift in position 1366.

ALIGNMENTS

```
The present invention relates to Mycobacterium tuberculosis (Mtb) vaccine candidate peptides. The invention also relates to a method for identifying Mtb vaccine candidate peptides as well as vaccines comprising these candidate peptides. Vaccines of the invention and Mtb vaccine candidate peptides are useful for inducing an anti- Mycobacterium tuberculosis (anti-Mtb) immune response by raising anti-Mtb antibody in a mammalian subject preferably human. They are used for immunishing a mammalian subject, preferably humans, against infection caused by Mycobacterium tuberculosis. The present sequence is a Mtb vaccine candidate peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New vaccine for immunizing a mammalian subject, preferably humans, against infection caused by Mycobacterium tuberculosis.
                                                                                                                                                            Mycobacterium tuberculosis; Mtb peptide; antibacterial; vaccine; infection; anti-Mtb immune response.
                                                                                                                           Mycobacterium tuberculosis (Mtb) peptide #61.

```
A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a specifically claimed sequence of the BSAT-6 M.tuberculosis antigen. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New immunogenic polypeptide(s) from soluble M. tuberculosis antigens useful for diagnosis of M. tuberculosis infection.

A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, ESAT-6. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or

This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel recombinant antigens and their encoding mucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity
                                                             Immunogenic Mycobacterium tuberculosis polypeptide(s) and DNA - used to develop products for the detection of M. tuberculosis infection and for diagnosis, treatment and prevention of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antigen; diagnosis; detection; infection; antibody; immunisation; vaccine; immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polypeptide comprising antigenic portions of M. tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                                                 This polypeptide comprises an antigenic portion of Mycobacterium tuberculosis antigen ESAT-16. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAM64291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as fusion proteins between these polypeptides and known antigens such as ESAT-6. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies, or oligonucleotide probes and primers
                                                                                                                                                                                                                                                                                                                ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tuberculosis, immunogenic; soluble, antigen, protective immunity, TB, vaccine, pharmaceutical, infection, diagnosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M tuberculosis Ag's M. tuberculosis Ag's M. tuberculosis Ag's M. tuberculosis Ag's M. polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutical compositions or tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce profiferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AZ19249 to AZ19460 and AAX19083 to AAX19225 are used in the exemplification of

The sequence represents Mycobacterium tuberculosis ESAT-6 antigen. Compositions comprising at least 2 heterologous antigens, as a fusion protein. and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting patients with acquired immunodeficiency disease, AIDS
                                                                                                                                                                                                                                                                                   Gaps

The invention relates to a recombinant nucleic acid molecule encoding a fusion polypeptide. The recombinant nucleic acid comprises a heterologous polynucleotide sequence encoding an antigen or an antigenic fragment from Mycobacterium sp. and a Leishmania polynucleotide sequence encoding a polypeptide or its fragment. The Leishmania polynucleotide is selected from TSA, LeIF, MIS, and 6H polynucleotides. Sequences of the invention are used in methods for eliciting immune response in mammals. They are useful as vaccines to elicit protective immunity against pathogenic microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusion polypeptides are used for enhancing the expression of polynucleotides, as in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is M. tuberculosis ESAT-6 antigenic protein
                                                                                                                                                     New recombinant nucleic acid molecule comprising a Leishmania TSA, LeIF, MIS or 6H polynuclectide, useful as vaccine to elicit protective immunity against pathogenic microorganisms e.g. Leishmania and Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        serological sensitivity; immune response; vaccine; ESAT-6 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mycobacterium species ESAT-6 protein.

Mycobacterium species antigens, nucleotides encoding them and compositions comprising such fusion proteins. The present invention particularly relates to mucleic acids encoding fusion proteins that compositions comprising such fusion proteins. The present invention particularly relates to mucleic acids encoding fusion proteins that include two or more individual M. tuberculosis antigens which increase include two or more individual M. tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with tuberculosis infection. Sequences of the invention are useful for ellotting an immune response in a mammal, e.g., human, immunised with BGG. They are useful in the diagnosis, treatment and prevention of Mycobacterium infection. The fusion proteins and the polymorates are useful as diagnostic tools in patients infected with Mycobacterium, in vitro and in vivo assays for detecting humoral antibodies or cell-mediated immunity against M. tuberculosis, for the diagnosis to generate or monitoring of disease progression, as immunogens to generate or elicit a protective immune response in a patient and for raising anti-M. tuberculosis antibodies in a non-human animal. Sequences of the invention are also used as vaccines. WIBB12A fusion proteins of the invention are also used as vaccines meaning contains and the invention are useful as in vivo diagnostic agents for a intradernal skin test. The present sequence is Mycobacterium species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ESAT6; Mycobacterium tuberculosis, 6kDa antigen; tuberculosis complex;
HYB76-8 reactive antigen; interferon-gamma; memory T-lymphocyte; vaccine;
M. africanum; M. bovis; delayed-type hypersensitivity reaction; therapy.
Composition comprising MTB39 antigen and MTB32A antigen from
Mycobacterium species, useful for eliciting immune response in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T-

                                                                                                                                                                                                                                                                   ö
                     This sequence represents the Mycobacterium tuberculosis ESAT6. ESAT6 is also known as the 6kpa antigen, or the HYB76-8 reactive antigen. ESAT6 is released from metabolism bacteria, and can be isolated from short term filtrates grown as shaken cultures for 7 days. ESAT6 also induces a release of interferon-gamma from reactivated memory T-lymphocytes. This protein sequence is included in the vaccine of the invention. The vaccine is for immunising an animal (including humans) against tuberculosis caused by a Mycobacteria belonging to the tuberculosis complex. The Mycobacteria of the tuberculosis complex are, M. tuberculosis, M. africanum, and M. bovis. The vaccine can evoke a protective immune response against tuberculosis or a delayed-type hypersensitivity reaction. The protein can also be included in a composition for diagnosing tuberculosis. The composition is injected intradermally, and a skin reaction is an indicator of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a purified or non-naturally occurring polypeptide (I) released from a metabolising mycobacteria comprising an ESAT6. Also called the 6 kpa antigen. The present sequence repersents Mycobacterium tuberculosis ESAT6. Forctein. Also described is a purified or non-naturally occurring polypeptide (II) with the ability to elicit a delayed type hypersensitivity reaction which comprises a T cell epitope of (I). (II) can be used with a carrier or vehicle in a composition for diagnosing tuberculosis caused by mycobacteria belonging to the tuberculosis complex, i.e. Mycobacterium tuberculosis, M. bovis and M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polypeptide secreted from Mycobacterium is useful as a vaccine against tuberculosis.

The present invention describes a bioreactive polypeptide (or immunologically equivalent analogue) produced in lactic acid bacteria which reacts with lymphoid cells primed with Mycobacterium tuberculosis complex mycobacteria (M. tuberculosis, M. africanum or M. bovis). The complex mycobacteria (M. tuberculosis, M. africanum or M. bovis). The colypeptide and ESAT-6 polypeptides are useful in compositions for tuberculosis compositions for tuberculosis complex mycobacteria. The ESAT-6 polypeptide can be used to diagnose compoint mycobacteria. The ESAT-6 polypeptide can be used to diagnose compoints mycobacteria blood samples with the polypeptide. The bloreactive polypeptide may be used in diagnostic compositions and vaccines for mycobacteria other than of the M. tuberculosis complex, e.g. M. avium which infects poultry and occasionally humans, M. leprae; they are especially useful when they do not react with lymphoid cells previously prined with M. tuberculosis complex, and so do not give rise to a diagnostic reaction in individuals infected with these bacteria. The polypeptides may also be used in in vitro diagnostic tests
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô

africanum. The composition can be used to detect microbial antibodies or components of mycobacteria in samples or in animals through the use of immunoassays. (II) can be used as a vaccine for immunishing an animal, including humans against tuberculosis caused by mycobacteria of the tuberculosis-complex. (II) induce a release of IFN-gamma from reactivated T-lymphocytes evoking a protective immune response. Vaccine containing (II) has the same protective potency as the live BCG vaccine against

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences for members of the esat-6 gene family from Mycobacterium tuberculosis. Thes proteins include Rv0287, Rv1036c, Rv1037c, Rv2346c, Rv2348c, Rv2653c, Rv2653c, Rv38905c. Rv3800c, Rv3891c, Rv3891c, Rv3891c, and Rv3905c. These can be used to produce vaccines against, and in the diagnosis of, tuberculosis (TB) infection. The present sequence is one the proteins of the invention
e.g. stimulation of interferon-gamma release from lymphocytes. The polypeptide has similar or higher bioreactivity as currently used tuberculin reagent in the standard delayed type hypersensitivity (DTH) skin test for tuberculosis, but may have greater specificity, being better able to discriminate between lymphoid cells primed from tuberculosis and from previous vaccination. The present sequence represents M. tuberculosis ESAT-6 used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptide encoded by a member of the esat-6-gene family for immunizing against and diagnosis of tuberculosis.

The invention describes a method of determining the efficacy of treatment for mycobacterial infection (such as pulmonary tuberculosis, tuberculosis lymphadentis and extrapulmonary tuberculosis). The method involves determining the level of T cells specific for a mycobacterial antigen that has decreased after the treatment and therefore determining the efficacy of the treatment. The method is useful for determining the efficacy of the treatment for mycobacterial infection. The miniminal probacterial infection is Mycobacterium tuberculosis or M.bovis infection. The invention also describes a method useful for determining the presence of a latent infection in a sample from the individual for the presence of cells specific for a mycobacterial antigen. Also described in a method for determining the effect of an intervention on a mycobacterial infection in an individual antigen of mycobacterial infection in a natividual and method for treating an individual infected by a mycobacterium. This is the amino acid sequence of Mycobacterium tuberculosis ESAT-6, the mycobacterial antigen measured in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò

Sequence 61, Application US/09813333
Patent No. US20020119160A1
GENERAL INFORMATION:
APPLICANT: DeGroot, Anne S
TITLE OF INVENTION: Human T Cell Response to MHC-Binding Motif Clusters
TITLE OF INVENTION: Human T Cell Response to MHC-Binding Motif Clusters
TITLE APPLICATION WUMBER: US/09/813,333
CURRENT FILING DATE: 2001-03-20
RIGHT APPLICATION NUMBER: 60/190,834
PRIOR FILING DATE: 2000-03-20
NUMBER OF SEQ ID NOS: 81
SSQ ID NO 61
SSQ ID NO 61
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-10-044-703-61:

APPLICANT: Statens Serum Intitut
APPLICANT: Anderson, Peter
TITLE OF INVENTION: M. Tuberculosis Antigens
FILE REFERENCE: 670001-2002.4
CURRENT APPLICATION NUMBER: US/09/804,980
CURRENT APPLICATION NUMBER: US/09/804,980
CURRENT FILING DATE: 2001-03-12
NUMBER OF SEQ ID NOS: 257
SOFTWARE: Patentin version 3.0
SEQ ID NO 172
LENGTH: 404
TYPE: ERT
CORGANISM: Mycobacterium tuberculosis
US-09-804-980-172

A;Title: DNA sequence analysis of the photosynthesis region of Rhodobacter sphaeroides
A;Reference number: 225222; MUID:20115911; PMID:10648776
A;Experimental source: strain DSM 3638
C;Comment: This enzyme, a novel sugar kinase, catalyzes the phosphorylation of glucose
ified Embden-Meyerhof pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

librate synthetase [imported] - Chlamydophila pneumoniae (strain J138)
C;Species: Chlamydophila pneumoniae, Chlamydia pneumoniae
C;Date: 02-Mar-2001 #sequence_revision 02-Mar-2001 #text_change 23-Mar-2001
C;Accession: R86594
R;Shirai, M.; Hirakawa, H.; Kimoto, M.; Tabuchi, M.; Kishi, F.; Ouchi, K.; Shiba, T.; Ish Nucleic Acids Res. 28, 2311-214, 2000
A;Title: Comparison of whole genome sequences of chlamydia pneumoniae J138.
A;Reference number. A86491; MUID:20330349; PMID:10871362
A;Accession: R86594
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-370 < STO>
A;Residues: 1-370 < STO>

--- PATHWAY: Arginine blosynthesis; second step.
--- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
---- MASS SPECTROMETRY: Mw=31711; METHOD=MALDI.
----- SIMILARITY: Belongs to the acetylglutamate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 45; DB 1; Length 300;

Riboflavin kinase (EC 2.7.1.26) (ATP:riboflavin 5'-phosphotransferase)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Abrances E.F., Silva A.M., Reis L.F.L.;
Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Catalyzes the phosphorylation of riboflavin (vitamin to form flavin-mononuclectide (FMN) (By similarity).
-!- CATALYTIC ACTIVITY: ATP + riboflavin = ADP + FMN.
-!- COFACTOR: Needs Zn(2+) or Mg(2+) for activity (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"Crystal structure of human riboflavin kinase reveals a beta barrel
fold and a novel active site arch.";

Structure 11:265-273(2003).

-| FUNCTION: Catalyzes the phosphorylation of riboflavin (vitamin B2)

-| CATALYTIC ACTIVITY: ATP + riboflavin = ADP + FWN.

-| CATALYTIC ACTIVITY: ATP + riboflavin = ADP + FWN.

-| CATALYTIC ACTIVITY: ATP + riboflavin = ADP + FWN.

-| CATALYTIC ACTIVITY: ATP + riboflavin = ADP + FWN.

-| CATALYTIC ACTIVITY: ATP + riboflavin = ADP + FWN.

-| FATHWAY: FWN and FAD biosynthesis.

-| SUBUNIT: Monomer.

-| SUBUNIT: Monomer.

-| SUBUNIT: Detected in brain, placenta and urinary bladder. X-RAY CRYSTALLOGRAPHY (1.7 ANGSTROMS) OF 9-155 IN COMPLEX WITH MG-ADP AND RIBOFLAVIN NUCLECTIDE.

-1- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-1- SIMILARITY: Belongs to the biotin and lipoic acid synthetases family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

Disclosure; Fig 4; 42pp; English.

The present invention relates to Mycobacterium tuberculosis (Mtb) vaccine candidate peptides. The invention also relates to a method for identifying Mtb vaccine candidate peptides as well as vaccines comprising these candidate peptides. Vaccines of the invention and Mtb vaccine tuberculosis (anti-Mtb) immune response by raising anti-Mycobacterium mammalian subject preferably human. They are used for immunising a mammalian subject, preferably humans, against infection caused by Mycobacterium tuberculosis. The present sequence is a Mtb vaccine candidate peptide

Wycobacterium pathogens comprises at least one majorly abundant

Mycobacterium pathogens comprises at least one majorly abundant

extracellular protein, i.e. the M.tuberculosis 110, 80, 71, 88, 45, 324,

228, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins, or their analogues,
homologues and subunite. The present sequence represents the 16 KD

protein. The vaccinating agents are used to protect against (or to treat
existing) infections by Mycobacterium (especially M. tuberculosis) while
the epitopes can also be used to detect presence of an immune response to
a Mycobacterium pathogen. The vectors, containing the DNA for the
extracellular proteins, are used to transform cells for production of
cernachinant DNA molecules. More generally the DNA from other pathogens
can be used in vaccines, e.g. against other bacteria, viruses, fungi and
protective compositions can be produced. They generate a response
effection, regardless of the strength or specificity of the immune
response. The vaccines are easy to produce and less toxic than known
killed or attenuated vaccines, so can be given to immunocompromised
subjects, e.g. those with HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vaccines derived from M.tuberculosis major abundant extracellular proteins - are easy to prepare and less toxic than conventional killed or attenuated vaccines, useful for protecting against or treating Mycobacterial infections.
                                                                                                                                                                                                                                                                                                            Vaccine; vaccinating agent; M.tuberculosis; pathogen; bacteria; virus;

```

Sequence 143 AA

```
This represents a Mycobacterium tuberculosis 16 kD protein. The invention provides an agent for vaccinating mammals against Mycobacterium. The agent comprises at least one of the major abundant extracellular 110, 80, 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins of M. tuberculosis, or at least 1 of their immunodominant epitopes and interleukin-12 (IL-12) or MF59 as adjuvants. The agent containing the nucleic acid encoding the extracellular products are used to raise a protective or therapeutic immune response against Mycobacterium, specifically M. tuberculosis. The immunodominant epitopes can also be used (typically in a cutaneous hypersensitivity test) to detect an immune response to vaccination. Preparation of the agent does not require selection of the most immunogenic products, so large scale production and purification are easy, resulting in a consistent, standardised for formulation, having lower toxicity than killed or attenuated vaccines. The agents provide a rapid and effective response (including a strong coll-mediated component) and are fafe even in immunocompromized subjects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

M. tuberculosis MPT63 protein.

(first entry)

20-NOV-2003

m

```
The present sequence is the MPTG3 protein from Mycobacterium tuberculosis. Another M. tuberculosis protein, MTC38, was also isolated. Both MPTG3 and MTC38 are secreted proteins with antigenic and immunogenic properties. MPTG3 and MTC38 polymucleotides and polypeptides may be used as vaccines for eliciting an immune response and/or protective immunity against M. tuberculosis or another member of the M. tuberculosis complex. The a vertebrate. Nucleic acid sequences encoding MPTG3 and MTC38 polypeptides are useful as probes in diagnostic tests for detecting a M. tuberculosis complex. Cooktails of at least three DNIstied recombinant antigens and cooktails of at least three DNIstied recombinant antigens and vaccines for bacterial pathogens and parasites
                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynucleotides and polypeptides secreted from Myobacterium tuberculosis, useful as vaccines and for immunoassays for detecting immune responses to Myobacterium tuberculosis.
                                                                                                                                              Mycobacterium tuberculosis; MPT63; MTC28; antibiotic; vaccine.

The invention discloses a purified Mycobacterium tuberculosis MPT63 or MTC28 (undefined) polypeptide, or their fragments, with antigenic and immunogenic properties. Also disclosed is a fusion protein comprising two domains of the MPT63 or MTC28 polypeptides or their fragments with the second domain in the fusion protein comprising a polyhistidine tag. M. tuberculosis is the causative agent of tuberculosis (TB) and the identification of mycobacterial antigens that induce protective T-cell responses and/or stimulate humoral immunity during tubercular infection is a major goal of research. The polypeptides, and polynucleotides encoding them, can be used in combinations or cocktails and are useful
                                                                                                                                                                                                                                                                                                                             for improving assays, preparing vaccines for bacterial pathogens and parasites and diagnosing infection and disease, in particular mycobacterial, Shigella, Listeria, Salmonella, Plasmodium, Leishmania and Trypanosoma infections. The nucleic acids can also be included in a vector and are useful as DNA vaccines to elicit an immune response and/or protective immunity against Mycobacterium infection in a vertebrate, preferably a human. The polypeptides are also useful as probes for the detection of a Mycobacterium tuberculosis complex. The sequence presented is the M. tuberculosis MPT63 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

The present invention relates to Mycobacterium tuberculosis (Mtb) vaccine candidate peptides. The invention also relates to a method for the administration of the vaccine candidate peptides as well as vaccines comprising these candidate peptides. Vaccines of the invention and Mtb vaccine candidate peptides are useful for inducing an anti- Mycobacterium tuberculosis (anti-Mtb) immune response by raising anti-Mtb antibody in a mammalian subject preferably humans. They are used for immunising a manimalian subject, preferably humans, against infection caused by Mycobacterium tuberculosis. The present sequence is a Mtb vaccine candidate peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vaccines against Mycobacterium containing major extracellular proteins - used to, e.g. induce protective and therapeutic immune responses, and for detecting an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences shown in AAW75570 to AAW75586 represent N-terminal amino acid
sequences of 14 exemplary major abundant extracellular products of
                                                                                                                                                                                                  New vaccine for immunizing a mammalian subject, preferably humans, against infection caused by Mycobacterium tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      M. tuberculosis 16 kD extracellular product N-terminal sequence 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mycobacterium tuberculosis; vaccination; extracellular product; immunodominant epitope; interleukin-12; MP59; immune response; opsonising humoral response; intracellular pathogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel nucleic acid encoding an abundant extracellular protein of Mycobacterium tuberculosis useful as vaccines for generating protective or therapeutic immune response against viral, bacterial, fungal and protozoal infections. They are also used as immunotherapeutic agents. The present sequence is M. tuberculosis strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A nucleic acid encoding an abundant extracellular protein of Mycobacterium tuberculosis useful as vaccines for generating protective or therapeutic immune response against viral, bacterial, fungal or protozoal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Wycobacterium tuberculosis. The invention provides an agent for vaccinating mammals against Mycobacterium. The agent comprises at least vaccinating mammals against Mycobacterium. The agent comprises at least cone of the major abundant extracellular 110, 80, 71, 58, 45, 324, 328, 50, 24, 23.5, 23. 46, 14 or 12 kDa proteins of M. tuberculosis, or at least 1 of their immunodominant epitopes and interleukin-12 (IL-12) or MFS9 as adjuvants. The agent containing the nucleic acid encoding the extracellular products are used to raise a protective or therapeutic immunodominant epitopes can also be used (typically M. tuberculosis. The immunodominant epitopes can also be used (typically M. tuberculosis. The preparation of the agent does not require selection of the most products, so large scale production and purification are easy, resulting in a consistent, standardised formulation, having lower toxicity than killed or attenuated vaccines. The agents provide a rapid and effective response (including a strong cell-mediated component) and are safe even in immunocompromised subjects. They prevent development of an opsonising humoral response that might spread intracellular pathogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Vaccines against Mycobacterium containing major extracellular proteins - used to, e.g. induce protective and therapeutic immune responses, and for detecting an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequences shown in AAW75570 to AAW75586 represent N-terminal amino acid sequences of 14 exemplary major abundant extracellular products of Mycobacterium tuberculosis. The invention provides an agent for vaccinating mammals against Mycobacterium. The agent comprises at least one of the major abundant extracellular 110, 80, 71, 58, 45, 328, 328, 328, 423.5, 23, 16, 14 or 12 kba proteins of M. tuberculosis, or at least 1 of their immunodominant epitcopes and interleukin-12 (IL-12) or MF59 as adjuvants. The agent containing the nucleic acid encoding the
